***Sr. Jira Admin***
***Name: Arun. K***
***Email: arunkare84@gmail.com***
***Phone: 508-709-9119***

---

*PROFESSIONAL SUMMARY:*

Overall 6+ years of experience in IT industry comprising of SCM, Build/Release Management and Change/Incident Management performing duties such as monitoring, automation, deployment, documenting, support and troubleshooting.

- Created multiple JIRA workflows and applied the condition, validators and post-functions in the transition to represent the business requirement process.
- Integrated the Atlassian Products such as Bitbucket, Bamboo, and JIRA to establish communication across each other and to make effective usage of the Toolset to obtain a consistent C/CD automated flow.
- JIRA Administration experience with customizing JIRA projects with various schemas, complex workflows, screen schemes. permission schemes, and notification schemes etc.
- Wrote fully automatic python script to on-board users to Atlassian suite of tools and created custom Service-Now catalogs to create Projects in Jira, Bitbucket and to create spaces in confluence utilizing webhooks to trigger Jenkins Job and created more than 1k projects in Jira, Bitbucket.
- Utilize Open-Source tool like Postman for REST API testing and meter or Pylot for performance/load testing.
- Made extensive use of application tunnels and leveraged application links to establish connectivity between the Cloud Atlassian suite of tools and on-premises applications.
- Configured and installed various plugins for Jira, Confluence and Bitbucket.
- Engaged in Jira Cloud automation to programmatically create custom fields, Fix versions.
- Integrated various On-prem Atlassian suite of tools to cloud.
- Performed critical application upgrades and Patching for Atlassian suite of tools on Datacenter/server.
- Strong knowledge on system administration and configuration of Atlassian Tools.
- Integrated Jira with Microsoft Teams to track, update, and manage Jira tickets seamlessly.
- Agile Program management, SAFe, JIRA-Agile Scrum/Kanban, Bug Cycle management, SDLC design advice using JIRA.
- Oversee creation and approval of critical process flow documents and project plans for new projects using SAFe
- Hands-on experience using JIRA REST APIs for integration with ServiceNow, Jenkins. Create various dashboards and used various gadgets on the dashboard to get project metrics and reports based on the team needs by utilizing the API.
- Worked on Apache servers and hosted Confluence from Amazon Infrastructure.
- Worked on JIRA and Confluences SSL Troubleshooter.
- Worked on release management using JIRA by creating custom Fix versions.
- Implemented Branching, Merging, Tagging and maintaining the version across the environments using SCM tools like GIT, Subversion (SVN), CVS on Linux platforms.
- Worked on Jira Cloud automation to programmatically create custom fields and Fix versions.

- Integrating JIRA with Agilecraft for Portfolio Management(Scaling beyond JIRA Team to Program/Portfolio/Enterprise level)
- Experience in writing JIRA API Tools to auto - move Service Desk tickets of one issue type to a JIRA project of another issue type and to extract the list of JIRA users with the respective JIRA Groups and project Roles.
- Experience in writing/building/integrating custom modules for JIRA/Confluence.
- Writing Splunk Queries, Expertise in searching, monitoring. analyzing and visualizing Splunk logs.
- Experience in alert handling. standard availability and performance report generation. Experience in root cause analysis of post-production performance related issues through Splunk tool.
- Designed customized Splunk dashboards, visualizations, configurations using customized Splunk queries.
- Implemented setting up Splunk to monitor the customer volume and track customer activity.
- Wrote Python Script that sends commits and pull-requests data to Splunk.
- Managed Atlassian JIRA installation, administration and maintenance with user base more than 89K users.
- Manage and Configure Various Atlassian Tools like JIRA, Bitbucket, Confluence, for Agile development in the organization.
- Integrated Jira with SAML single sign-on and Azure Active directory for User management and Multiple IDP setup.
- Data migration from Server or Datacenter to Atlassian Cloud.
- Implemented and configured Opsgenie Cloud to effectively monitor incident management by creating custom teams and RoTA schedules.
- Worked on POC for integrating Opsgenie Cloud with Jenkins using webhooks.
- Used Groovy scripts on Script Runner module to compose custom scripts for JIRA.
- Deployed Jira and Confluence applications on AWS and Azure VM's.
- Created custom dashboards, advanced filters and formula-based fields.
- collaborated with several third-party plugin vendors to address plugin-related issues within Jira Cloud Enterprise
- Imported multiple Jira projects and Confluence spaces to the cloud environment.
- Worked with Docker and Kubernetes on multiple cloud providers, from helping developers build and containerize their application (CI/CD) to deploy either on public or private cloud.
- Setup V2 Docker registry for local image storage/management and worked on installation of Docker using Docker toolbox and worked on creation of custom Docker container images, tagging and pushing the images.
- Used Docker Registry API to interact with the registry. Worked on installing Docker using Docker toolbox. Created Docker images using a Docker file. Worked on Docker container snapshots, removing images, and managing Docker volumes.
- Designed, configured and deployed Microsoft Azure for a multitude of applications utilizing the AZURE stack(Including Compute, Web & Mobile, Blobs, Resource Groups, Azure SQL, Cloud Services, and ARM), focusing on high-availability, fault tolerance, and auto-scaling.
- Extensive knowledge in DevOps/AWS tools such as Chef, Vagrant, Virtual Box, Puppet, Ansible, Jenkins, Maven, ANT, SVN, GIT, and Docker.
- Excellent knowledge on Java/J2EE and also the ability of developing XML, HTML, Shell Scripts and Perl Scripts.
- Experience working on migrating applications from internal data center to AWS instances by setting Security Groups, Elastic Load Balancer and AMIs, Auto Scaling to design cost effective, fault tolerant and highly available systems.
- Experienced with both framework and cloud formation to automate AWS environment creation. Ability to deployment on AWS, using build scripts (Boto 3 & AWS CLI) and automates solutions using Shell and Python.
- Strong knowledge and experience on AWS Cloud services like EC2, S3, EBS, RDS, VPC, and IAM also familiar with Cloud watch, Elastic IP’s on AWS.
- Managed Linux and Windows virtual servers by configuring and monitored distributed and multi-platform servers using Chef on AWS EC2.
- Experienced in Linux container orchestration with Docker, Kubernetes, CoreOS, ETCD, and more.

***Work Experience:***

***Pilot Flying J, Knoxville, TN***

***Role: Sr. Atlassian Jira Administrator*** ***July 2024 – Present***

***Responsibilities:***

- Administer and configure JIRA and Confluence environments for over 5000 users, supporting multiple departments including Development, QA, and Project Management.
- Customized JIRA workflows, fields, issue types, and screens based on departmental requirements, improving task tracking efficiency by 25%.
- Integrated JIRA with Bitbucket and Bamboo to automate DevOps workflows, reducing manual intervention and enhancing collaboration between development and operations teams.
- Managed user permissions and roles across Confluence spaces, ensuring compliance with company security policies.
- Developed custom automation scripts using ScriptRunner to automate repetitive tasks, improving team productivity.
- Provided regular training and documentation for users to enhance adoption and effective use of JIRA and Confluence.
- Integrated JIRA Cloud with Slack, GitHub, and other third-party cloud services to enhance team collaboration and productivity.
- Configured Confluence Cloud spaces and templates for different departments, improving content organization and access across teams.
- Managed user access and permissions using Atlassian Access and SSO, ensuring seamless integration with existing enterprise authentication systems(Ping, Azure AD).
- Provided training for JIRA Cloud and Confluence Cloud users, covering best practices, efficient usage, and troubleshooting common issues.
- Worked with DevOps and IT teams to monitor system performance, identify areas for improvement, and implement system enhancements.
- Automated key business processes using Atlassian Cloud automation tools, resulting in a 25% improvement in operational efficiency.
- Managed space permissions and content organization in Confluence Cloud, promoting collaboration and knowledge-sharing across distributed teams.
- Created and maintained custom JIRA Cloud dashboards and filters for project managers, providing real-time insights into task status and team performance.
- Implemented JIRA Cloud automations for sprint planning and backlog management, cutting manual input time by 20%.
- Standardized Confluence Cloud templates and spaces, improving cross-team documentation practices.
- Installed and configured various third-party plugins in JIRA and Confluence, including the Tableau Connector and Smartsheet Connector for JIRA, to enhance data integration and streamline workflow processes.

***Prudential Financial, Newark, NJ***

***Role: Sr. Atlassian Jira Administrator*** ***Feb 2022 – July 2024***

***Responsibilities:***

- JIRA Administration, Jira development, Agile Craft/Jira Align, analysis, design, development, Project management. Agile Methodologies, Collaboration tools
- Agile Program management, Change management. JIRA - Agile Scrum/Kanban/SAFe, Bug Cycle management, SDLC design advice using JIRA.
- Worked on JIRA customization - Issue Schemes, Workflow Schemes, Field Configuration Schemes, Screen Schemes, Permission Schemes, and Notification Schemes.
- Experienced in Atlassian REST API's and Atlassian SDK Toolkit.
- Experience in writing JIRA API Tools to auto - move Service Desk tickets of one issue type to a JIRA project of another issue type and to extract the list of JIRA users with the respective JIRA Groups and project Roles.
- Migrated Jira across environments and worked on Jira database MYSQL dumps.
- Experience in Administration of Production, Development and Test environments carrying different operating system platforms like Windows, Ubuntu, Red Hat Linux, HTTP, TCP.
- Experience in Querying RDBMS such as Oracle, MY SQL and SQL Server by using SQL for data integrity.
- Administrated and managed Atlassian tool suites, (installation, deployment, configuration, migration, upgrade, patching, provisioning, server management etc.)
- Integrated JIRA with Splunk for ALM team to alert and submit a ticket for various issues in the application development phase.
- Worked in Integrations and migration of ServiceNow with JIRA Cloud (bi-directional integration).
- Used Python library for interacting with JIRA via REST APIs.
- Created custom service Desk forms to automate creation of Jira boards, Projects and teams.
- Integrated JIRA with ServiceNow, Jira Align, Confluence Cl/CD tools like Bitbucket. GitHub, and Jenkins.
- Provide configuration and administrative support of self-hosted (server) JIRA and Confluence.
- Experienced in Task Scheduling &Systems backup using Python. Shell scripting, and familiar/knowledgeable with PowerShell.
- Create various dashboards based on the team needs by utilizing the Rest API and Python script.
- Strong experience in Linux Administration with proven knowledge of security procedures and settings.
- Worked on developing different scripts using Shell and python for day-to-day administrative tasks.
- Created users on Active Directory, synched the users on Jira and assigned groups and spaces Installed and managed plug-ins for Jira and confluence in production environment.
- Troubleshoot and fix errors common to JIRA Applications and Application servers.
- Worked on Add on such as Tempo, JSU, Automation for JIRA, Power BI, X-Rays, Script Runners.
- I undertook the setup of Atlassian Access and utilized Azure AD to seamlessly migrate 89k users from Azure AD to Atlassian's Cloud platform.
- Experienced working with Logical Volume Manager ( LVM ) in creating physical volumes, volume groups and logical volumes, extending and resizing the volume groups when needed.
- Administer JIRA instances on a day-to-day basis. Research and implement Atlassian best practices.
- Manage user, groups and role permissions to projects.
- Configured LDAP/Azure AD integration with Jira Cloud, Confluence, Bitbucket.
- Experienced in setting up high availability/disaster recovery for Confluence.
- Enforced inclusion of JIRA ticket ID in commit messages to ensure mapping of each feature to the corresponding feature branch in Bitbucket.
- Created branching and merging strategy with multiple branches and used Bitbucket for SCM.
- Performed proof of concept for GitHub and Confluence Cloud.

- Hands on experience in customizing Splunk dashboards, visualizations, configurations using customized Splunk queries.
- Successfully integrated Splunk with Tableau Desktop to capture and analyze Jira Align Audit logs and Jira change logs. This integration enhances data visibility and analysis capabilities, providing valuable insights for informed decision-making and compliance tracking.
- Developed an automated Python script to streamline user onboarding for Jira Align, ensuring strict access control enforcement, and significantly improving the efficiency and security of our user management processes.
- Designed and implemented a custom ServiceNow (SNOW) form that fully automates the creation of Portfolios, Solutions, and Programs in Jira Align. This solution significantly enhances operational efficiency and data accuracy, contributing to more streamlined and effective project management processes.
- Worked on integrating connection between Jira and Jira Align using align connectors.
- Effectively implemented SAML Single Sign-On (SSO) for Jira Align with 3k user base, enhancing security, user experience, and access control for our organizational collaboration and project management, streamlining authentication processes.
- Successfully addressed and resolved multiple integration challenges, optimizing synchronization between Jira and Jira Align Jira boards, ensuring seamless and efficient collaboration for our project teams.

***Environment:*** AWS, Jenkins, Tomcat, Perl, Python Shell Scripts, XML, Data Center, ANT, UNIX, Windows 7, Spring, Service Now, Subversion (SVN), Nagios, JIRA, Jira Align, ServiceNow, Azure, ServiceDesk, Confluence, Bitbucket, Cl/CD, LDAP, GitHub, MySQL, Splunk, LVM, Groovy, YML.

***Move Inc, Santa Clara, CA***

***Role: Sr. DevOps/Atlassian Engineer*** ***Sep 2019 – Jan 2022***

***Responsibilities:***

- Responsible for using AWS Console and Command Line Interface for deploying, operating, setup and build AWS services specifically VPC, EC2, S3, EBS, IAM, ELB, Cloud Formation, Cloud Watch, Security Group, Auto Scaling, KMS Dynamo DB, Code Commit, Code Deploy, Direct Connect Redshift, Lambda Services, EMR, Elastic Search and RDS in Cloud Formation JSON templates.
- Working on multiple AWS instances by setting services like Route53, SES, SQS, SNS and created and administered DNS system using Route53.
- Worked with full AWS stack (Kinesis Firehose, Lambda server-less, Cognito IAM, Blue-Green deployment).
- Provisioned the highly available EC2 instances using Terraform and Cloud Formation and wrote new plugins to support new functionality in Terraform. Managed AWS infrastructure as code using Terraform.
- Installed Pivotal Cloud Foundry on EC2 to manage the containers created by PCF. And deployed application on PCF using CF push and Urban code deploy.
- Researched and developed scalable Linux deployments on AWS via CoreOS and Docker and used Docker Compose to develop dependent instances to be deployed in the EC2 platform.
- Managing and support Atlassian applications on different cloud platforms like Azure and AWS
- Designed and worked with team to implement ELK (Elastic search, Log stash and Kibana) Stack on AWS.
- Created AWS RDS MySQL DB cluster and connected to the database through RDS MySQL DB Instance using the Amazon RDS Console.
- Used Terraform in AWS VPC to automatically setup and modify settings by interfacing with control layer.

- Experience with S3 Bucket services like creating buckets, managing policies, configuring buckets with permissions, logging, versioning and tagging and used S3 Bucket and Glacier for storage and backup on AWS.
- Worked on AWS Cloud Watch for monitoring the application infrastructure and used AWS email services for notifying & configured S3 versioning and lifecycle policies to and backup files and archive files in Glacier.
- Worked on migrating the on-premises application from its physical Storage Racks to AWS by using EC2, S3.
- Migrated the on-premises MySQL & PostgreSQL databases to AWS Dynamo DB by using EC2, RDS and Unmanaged cloud data migration tools like Rsync, S3 CLI and Glacier Vault.
- Served application data using Lambda functions to store data in NOSQL database Dynamo DB. Configured REST API's using API Gateway that hit lambda which in turn invokes lambdas to do necessary operations.
- Installed Redshift on AWS and imported the legacy data from Oracle to Redshift. Participated in integration of applications with existing API's.
- Written Chef Cookbooks for various DB configurations to modularize and optimize product configuration, converted production support scripts to Chef Recipes and AWS server provisioning using Chef Recipes.
- Hands on experience with Chef and OpsWorks in AWS cloud environment including SSRS and SSAS.
- Developed multiple Chef Cookbooks, Chefspec, Berkshelf, Kitchen, Chef Compliance, Recipes and Roles and Ansible playbooks to automate the deployment of the applications to different Prod/ QA environments.
- Developed automation scripting in Python (core) using Puppet to deploy and manage Java applications across Linux servers.
- Responsible for the creation of scripts using Ant, Python and Unix by hosting on application servers.
- Participated in GitLab POC and migrated all repos from GitHub to GitLab. Integrated GitHub and GitLab, Gradle with Jenkins to implement the continuous integration process.
- Created featured develop, release branches in Bitbucket/GIT for different application to support releases and CI builds and build, configured and supported Application team environments.
- Worked on JIRA and Confluences SSL Troubleshooter.
- Build custom JIRA dashboards with time tracking gadgets in real-time.
- Worked on release management using JIRA by creating custom Fix versions.
- Integrated Jira Cloud with SAML single sign-on and Azure Active directory for User management and Multiple IDP setup.
- Data migration from Server or Datacenter to Atlassian Cloud.
- Developed customized automation rules to initiate Jenkins builds through webhooks in Jira Cloud.
- Configured and maintained NFS, DNS clients systems for AIX, Linux and Solaris Servers. And handled multiple Linux/CentOS servers for application deployment and management.
- Responsible for working on several Docker components like Docker Engine, Docker Hub, Docker Compose, Docker Registry and Docker Swarm.
- Worked on Docker container snapshots by attaching to a running container, removing images, managing directory structures and managing containers.
- Experienced with release engineering, configuration management in Tomcat web application environment and worked on issues like heap, non-heap memory and designed application for Mobile UI & responsive websites.
- Having good knowledge on Prometheus tool for monitoring data base systems.
- Integrated the application with Spring MVC using Spring Boot, Spring Dependency Injection (DI), and Spring Annotations and used Spring Boot for the application development.
- Experience in using open-source monitoring tools like Zabbix, Nagios, Cacti and good knowledge in Splunk.

***Environment:*** AWS, PCF, Docker, Kubernetes, Jenkins, Java/J2EE, MAVEN, Cucumber, Gherkin, Oracle, Cassandra, Tomcat, Perl , Python Shell Scripts, XML, Data Center, ANT, UNIX, Windows 7, Spring, Service Now, Subversion (SVN), Nagios.

***Education Details:***

Bachelor of Technology – Computer Science & Engineering Andhra Pradesh, India
Masters in computer science from New England College Henniker, New Hampshire

***Certifications:***

Atlassian Agile Project Management Professional Certificate
ACP-120 Jira Administration for Cloud
Atlassian Rovo Fundamentals Certificate
Docker Foundations Professional Certificate
AWS Certified Solution Architect - Associate
